

#### Description of program cclabel.c

This program looks for the connected regions and labels the connected regions with a distinctive label  $L = 1, 2, 3, \dots, n$ . The connectivity is defined as: horizontally or vertically connected pixels; but pixels diagonally connected are not defined as connected pixels.

The program will work in the following way:

1. Create an output image(im) to store labels and a template image(tm) to store original contents .
2. Add an external boundary of zero values outside the template.
3. Clear the labels (the content of im), and set the label L to 1.
4. Search for the non-zero pixels and label it; also, find pixels connected with it and label it with the same label L.
5. After the entire region is labeled, then increase the label L.
6. Repeat step 4 and 5.

```

/*****
/* cclabel.c   Labels connected regions on a single byte image  */
